## Subject Index

---

- Americium, estimate of dose to man from shellfish consumption 187  
Aquatic pollution, monomethyltin 225  
—, tributyltin 207  
Atmospheric pollution, particulate matter from coal combustion 251  
  
Bone fluoride determination, effect of sample weight on result 281  
  
Divalent metal ions, correlations between physical parameters and toxicity 275  
Dredged materials, problems of disposal 11  
  
Fluoride, effect on vegetation 97  
—, potential mutagenicity 79  
Fluoride in bone, errors in analysis 281  
  
Industrial waste water treatment, adsorption of heavy metals by Cattails and human hair 267  
  
Lead, in airborne particulate matter 71  
—, in dust 45  
—, in human bones 61  
  
Mercury, effect of selenium on toxicity 197  
Metals in dust, concentrations 25  
Monomethyltin, formation under estuarine conditions 225  
  
Organic matter, change during composting of plant residues 241  
  
Pentachlorophenol, uptake, accumulation and detoxification in earthworms 113  
Petrol lead reduction, effect on airborne concentrations 71  
Plutonium, estimate of dose to man from shellfish consumption 187  
Polychlorinated biphenyl congeners, concentrations and toxicity 141  
  
Radioactivity, of building materials 181  
Radioisotopes, accumulation by mosses 173  
Radionuclides, transfer from pasture to cows' milk 161  
  
Selenium, influence on mercury accumulation from solution 197  
Sodium pentachlorophenate, fate in soil 127  
—, uptake and accumulation in earthworms 113  
  
Toxic elements, enrichment on particulate matter 251  
Tributyltin, level in estuaries 207  
  
Weathering of monuments 1
